## **LFS SPORT & SPECIALTY NETTING**

*If you can imagine it, we can build it!*

The Sport & Specialty division of LFS Inc. is dedicated to creating solutions to containment problems using the huge variety of netting we have available. Netting has hundreds of uses. It is flexible, attractive and inexpensive when compared to solid structures. We provide quality, custom products built by professional net hangers.

***We specialize in custom design.***

**Call us for a custom quote and samples of our netting:**

## GOLF DRIVING RANGE NETS

Our nets are constructed to perform, specially treated to withstand ultraviolet rays and weather, and custom designed to fit properly. We use only the highest quality materials and construction methods.

### Nylon netting

Our netting is made in America with Dupont Type 66 high-tenacity, high-strength nylon. A thorough coating of thermal and UV stabilizing additives give these fibers significantly better UV resistance, and an extended service life. Once the net is made to our specifications, it is dyed black and then treated again with a final UV protective coating. We stock two strand sizes, both with very high breaking strengths: #12 standard with 116 lbs. breaking strength and #18 heavy-duty with 191 lbs. breaking strength.

### Custom construction

Our net panels are designed to fit properly, custom fabricated in our 40,000 square-foot facility by our own full-time professional net hangers. The net is double-laced at each mesh to a rope border for the full perimeter, with vertical riblines installed to coincide with pole locations. The rope border has a breaking strength of 2,300 lbs. and includes galvanized corner thimbles to eliminate chaffing at the major stress points. The custom made net panels snap onto support cables making installation quick and flexible enough to match the specific configurations of each project.

### Quick installation

We work with highly qualified contractors experienced in range installation nationwide. Course and range owners agree with installers that our system installs easily, looks professional, and is designed to last.

### Warranty

Our range nets carry either a five-year or seven-year limited warranty depending on twine size. We stock all the hardware needed for complete installation, and we supply poles, wood or steel, for any location across the country.

## GOLF PRACTICE CAGES

Our golf practice cages are great for home, pro shops, club designers, schools, and training facilities. They feature high quality, durable construction to stand up to outdoor use and a clean, professional look suitable for indoors.

### Our standard golf practice cage

Our standard golf practice cage measures 10 feet high x 10 feet wide x 10 feet deep. It includes an easy-to-assemble one inch diameter aluminum pipe frame with fittings, a net cage made with 3/4" square mesh netting, 210d/36 thread (95 lb.

test) with a 2" wide nylon webbing machine sewn around the top perimeter and down the four vertical corners and edges. 3/8" grommets are spaced all along the top and in the corners for easy attachment. The bottom edge is bordered with a machine sewn leaded rope to prevent balls from escaping. An easily attached (or removed) net baffle, 9-1/2 feet x 9-1/2 feet, receives the impact of the ball and saves wear on the back of the net cage. We also offer an optional 30" x 30" heavy-duty target.

**Standard golf practice cage netting, 10'x10'x10', with baffle \$239.00**  
**New! Aluminum tube frame, fits our standard cage netting \$325.00**  
**Plus shipping & handling**

### Golf practice net panels

These are flat net panels that can be suspended indoors or outdoors. The panels are made of 3/4" square mesh nylon netting, 210d/36 thread (95 lb. test) dyed black and treated to withstand ultraviolet rays. These net panels are finished with a 5/16" diameter nylon treated rope with attachment loops in all four corners.

### Combination golf/batting cages

We construct this combination cage with 3/4" square mesh netting, #15 thread, nylon (105 lb. test) dyed black and treated with an ultraviolet ray inhibitor. The cage is bordered with a 3/8" diameter black polypropylene braided rope (2,500 lb. test) around the top, and top support lines and tie-off tag lines. The bottom edge of the net has a leaded rope to prevent balls from escaping. This cage has a front/side entrance flap. There is no standard frame with this cage.

## BATTING CAGES

We build high quality batting cages for professional, commercial, and recreational use. The netting we use is the highest quality 100% commercial nylon on the market, available in a variety of twine strengths and dimensions from lightweight #15 to professional #48.

### Cage construction

All our cages are bordered along the top and corner edges with 3/8" diameter black braided polypropylene rope. We also include top support lines to maintain a flat top to prevent sagging. The cages are built with a bordered corner overlap entrance. The bottom edge of the cage is available without a border, or bordered with an internal leaded rope. The cages are dyed black and treated with an ultraviolet ray inhibitor for outdoor protection against the sun and weather.

**Standard batting cage, 12'x12'x 70', #18 nylon thread \$599.00**  
**Heavy-duty batting cage, 12'x12'x 70', #36 nylon thread \$999.00**  
*Plus shipping & handling*

### Backstops

Using the same variety of netting as the batting cages, our backstop nets are rope bordered and built to your specifications. Great for spectator safety at ball fields and street safety for any type of play field. We can help with poles, suspension systems, and installation on larger projects. Like our driving range netting these can include pulleys to lower nets when not in use for long periods of time.

## LANDFILL NETS

Like our golf range nets, our landfill containment nets are constructed to perform, specially treated to withstand ultraviolet rays and weather, and custom designed to fit properly. We use only the highest quality materials and construction methods, and our landfill nets carry either a five-year or seven-year limited warranty, depending on twine size.

### Nylon netting

Our netting is made in America with Dupont Type 66 high-tenacity, high-strength nylon. A thorough coating of thermal and UV stabilizing additives give these fibers significantly better UV resistance, and an extended service life. Once the net is made to our specifications, it is dyed black and then treated again with a final UV protective coating. We stock two strand sizes, both with very high breaking strengths: #12 standard with 116 lbs. breaking strength and #18 heavy-duty with 191 lbs. breaking strength.

### Hardware & poles

We stock all hardware and cable for net and pole installation, including aircraft cable, ground anchors, turnbuckles, thimbles, shackles, snap hooks, eyebolts, cable clamps, lag screws with eyes, extension bolts & plates, curved flat washers, and galvanized rings. We also supply various types of poles, including wood, steel, and cement.

Optional pulley systems are available with hand winches, pole top pulleys & guides, cable slide guides, cleats, and cable. Our high-wind nylon coated clad cable package features a diagonal crisscross design that reduces stress on netting and the sail effect.

### Installation

We work with highly qualified, experienced independent contractors, licensed and bonded. Netting repair services include storm damage and normal wear and tear; we can do repairs at your site.
